

PD Endoseptone

Solution for root-canal disinfection

Composition

p-Chlorophenol 30%, Dexamethasone Acetate 0.1%, Thymol 5%, excipient ad 100%

Properties

PD Endoseptone is a solution which offers a triple-action: bactericidal, sedative & anti-inflammatory, thanks to the added Dexamethasone. It also reduces the risk of allergic reactions.

Indications

- Disinfection of the root-canal & deep caries
- Treatment against gangrene of the pulp
- Disinfection of a narrow, obturated or partially calcified root-canal

Directions for use

- Dry the root-canal thoroughly
- Following a pulpectomy: insert 1 or 2 drops of preparation into the root-canal & allow few minutes for it to take effect. Remove any excess solution with a cotton pellet or an absorbent paper point
- Following the extraction of gangrenous pulp: use as a dressing by inserting into the root-canal with a smooth broach & obturate temporarily. Leave 'in situ' for at least 3 days.

Precautions

If used after an arsenical treatment, first rinse the root-canal with an aqueous Iodine solution, and then rinse with water & dry

Packaging

Bottle of 15ml
